David Hyunyoo Jang

hwjang00@snu.ac.kr daylight00 daylight-00 | US Citizen

Education

Seoul National University **Mar 2022 – Feb 2028 (Expected)**
PharmD *Seoul, South Korea*
Selected Coursework: Biochemistry · Pharmaceutical Statistics · Drug Delivery Systems

Korea University **Mar 2019 – Aug 2021**
Coursework in Materials Science and Engineering (no degree) *Seoul, South Korea*
Selected Coursework: Organic Nanomaterials · Fundamentals of Data Science

Research Experience

AI Protein Design Lab, Korea Advanced Institute of Science and Technology (KAIST) **Jun 2025 – Aug 2025**
Undergraduate Researcher (advisor: Gyu Rie Lee) *Daejeon, South Korea*

Collaborative small-molecule sensor binder design campaigns
- Developed, standardized, and released a reproducible end-to-end binder design workflow during phenytoin and carbamazepine sensor-design campaigns, integrating diffusion-based backbone generation, LigandMPNN, Rosetta scoring, AF3/Boltz-2 refolding, PLACER, TMalign, and RMSD-based triage with parquet-based metric lineage and SLURM-scalable execution. [code]
- Developed metric-guided LigandMPNN–FastRelax recycling to diversify and optimize candidate pools beyond sequence-only sampling across phenytoin/carbamazepine campaigns; in the carbamazepine campaign, expanded screened candidates (*21→275*) and improved the best Rosetta interface $\Delta\Delta G$ score (*–25.4→–31.6*). [code]

RFdiffusion2 atom-wise RASA conditioning for ligand orientation control
- Implemented inference-time atom-wise RASA conditioning for RFdiffusion2 to control buried/exposed ligand atoms and improve ligand-orientation control while preserving compatibility with global RASA inputs. [PR]

Laboratory of Computational Drug Discovery, Seoul National University **Jul 2023 – Aug 2025**
Undergraduate Researcher (advisor: Juyong Lee) *Seoul, South Korea*

PREpiBind — pMHC-II binding: representation benchmark
- Independently built PREpiBind, a joint-attention framework benchmarking 10 protein representations under a fixed architecture — BLOSUM62, structure-prediction embeddings (AlphaFold3/Chai-1/Boltz-1, extracted by modifying inference code), and protein language models (PLMs: ESMC/ESM3) — for pMHC class II binding on IEDB qualitative, MS, and IC50 datasets; PLMs generally led pooled performance, exceeding NetMHCIIpan-4.3, MixMHC2pred-2.0, and DeepNeo on qualitative and MS benchmarks (NetMHCIIpan-4.3 led on thresholded IC50).
- Built leakage-controlled splits and stress-tested generalization under leave-one-molecule-out and mouse (H2) held-out validation, where the PLM advantage narrowed; re-implemented DeepNeo in PyTorch (ROC-AUC 0.894, near its published 0.882) for a fair comparison.
- Showed that ESMC 300M matches larger PLMs (ESMC 600M, ESM3 Small/Medium) within seed variation (ROC-AUC 0.919–0.921); released code (MIT license), datasets, and trained checkpoints. [preprint; code]

LLMs on the Korean Pharmacist Licensing Exam
- Designed and built an end-to-end benchmark of 27 LLMs — 7 proprietary and 20 open-source (4–104B) — across six KPLE exam years (2019–2024) in Korean and English, covering question extraction (text + vision-OCR), LLM-based translation, local/API inference, and official scoring with human-percentile normalization.
- 7 models passed all years in both languages — the top reaching the top 12% of human examinees — under a logarithmic size–performance trend; developed a multi-pronged data-contamination analysis arguing against pretraining leakage as the dominant performance driver. [preprint; code]

CB1 receptor small-molecule virtual screening
- Reproduced an end-to-end structure-based virtual screen of the Enamine Hit Locator Library (460K compounds) against the CB1 receptor on an 8-GPU cluster (∼12 h) — self-compiling AutoDock-GPU from source for multi-GPU execution (the prebuilt binary used 1 of 8 GPUs) — and automating batch docking, result parsing, and ranking.

Structure & Knowledge Injection into Machine Learning Lab, Seoul National University **May 2024 – Sep 2024**
Undergraduate Researcher (advisor: Jay-Yoon Lee) *Seoul, South Korea*

Semi-supervised data augmentation for RoseTTAFold2NA *collaboration with Minkyung Baek's lab*
- Implemented the training pipeline for a semi-supervised joint-loss objective that augments RF2NA with unlabeled self-distilled structures — built the mixed labeled/unlabeled data loader, per-batch loss routing, and a distributed sampler with tunable unlabeled fraction, consolidating scattered prototype scripts into one parameterized training entry point.
- Designed and ran a controlled low-label study — PDB-only vs distilled-augmentation vs joint-loss semi-supervision across 10/30/50% label-density regimes — to test whether unlabeled data improves RF2NA learning under sparse supervision.

Systems Pharmacology Lab, Seoul National University **Jun 2023 – Jul 2023**
Undergraduate Internship (advisor: Minsoo Noh) *Seoul, South Korea*

- Performed HaCaT cell culture and PGE_2 competitive ELISA to assess anti-inflammatory effects of tryptophol; conducted dose–response analysis and benchmarking against NSAIDs.

Manuscripts & Presentations

[1] PREpiBind: Protein Representation-integrated Epitope–MHC Class II Binding Prediction
David Hyunyoo Jang, Dongwoo Kim, Untaek Hwang, Byungho Park, Yoonjoo Choi, Juyong Lee
Submitted; preprint: *bioRxiv* (2026), doi:10.64898/2026.09.15.751749
KIDDS 2025 Summer Workshop (Korean In silico bioDesign and Discovery Society, Poster)

[2] Proprietary and Open-Source Large Language Models on the Korean Pharmacist Licensing Examination: A Comparative Benchmarking Study
David Hyunyoo Jang, Juyong Lee
Under review; preprint: *medRxiv* (2025), doi:10.1101/2025.04.15.25325584

Outstanding Research Presentation in 2024 SNU Student-Directed Education Undergraduate Research Program (Talk)

Awards & Funding

Research Excellence Award, 2024 SNU Student-Directed Education Undergraduate Research Program **2025**
President of Seoul National University

- Awarded to two projects per fields (ten total) for excellence in research execution and outcomes.

2024 SNU Student-Directed Education Undergraduate Research Program **2024**
Faculty of Liberal Education, Seoul National University

- Selected as one of 36 projects to receive funding for undergraduate research. *(KRW 7M)*

Leadership & Communication

SNU Alpha | Deep Learning Study Club **Spring 2022 – Winter 2024**
Executive Member, Co-Founder *College of Pharmacy, Seoul National University*

- Peer-taught deep learning fundamentals and applications in computational drug discovery to pharmacy students.
- Led weekly study sessions on Natural Language Processing (Fall 2023) and PyTorch (Spring 2024).

Military Service **Aug 2025 – Feb 2027 (Expected)**
Team Leader, Sergeant *III Corps, Republic of Korea Army*

- Led a 10-person team at an air-defense emplacement, coordinating daily operations and training.
- Operated and maintained air-defense radar systems in a frontline sector along the Korean DMZ.

Seoul National University Hospital **Dec 2024 – Feb 2025**
Hospital Pharmacy Practicum *Seoul, South Korea*

- Completed rotations in 12 specialty departments, gaining broad exposure to hospital pharmacy practice.
- Conducted drug therapy case reviews and provided patient counseling in multidisciplinary clinical settings.

E-Blue Pharmacy **Feb 2025 – Mar 2025**
Community Pharmacy Practicum *Suwon, South Korea*

- Screened prescriptions for errors and performed medication therapy management interventions.
- Conducted patient counseling for prescription medications and over-the-counter consultations.

Technical Skills

Programming & Data: Python, PyTorch, Numpy, Bash, pandas, matplotlib, Streamlit, Nginx
Modeling & Docking: RDKit, PyMOL, Chimera, AutoDock, PyRosetta, RFdiffusion (AA), LigandMPNN, AlphaFold3
Systems & DevOps: Linux, Git, Slurm, conda/mamba, HuggingFace
Experimental Techniques: cell culture (HaCaT), buffer/reagent prep, competitive ELISA, serial dilutions, plate reader
